Longer-term outlook and milestones

Descriptive projection; not forced to meet targets.

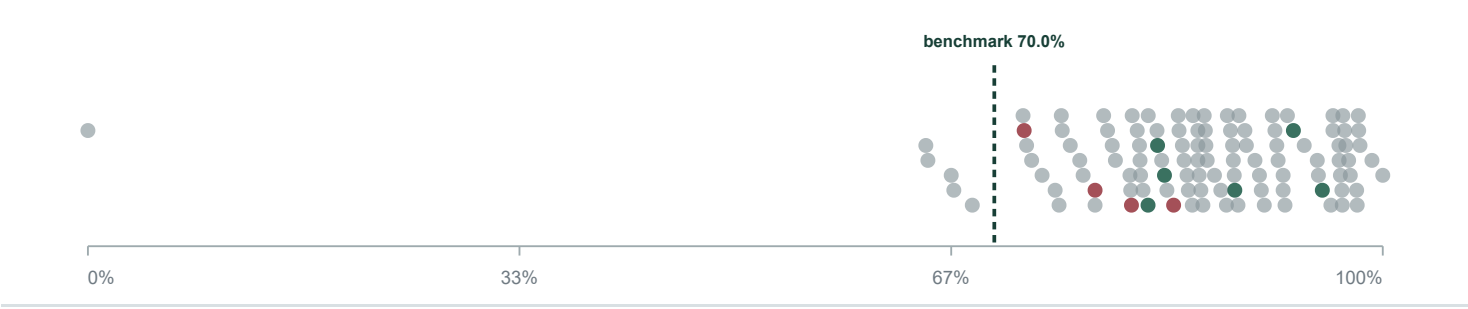

Benchmark: 70% national standard. 15.9pp above milestone
Data: NHS England two-hour urgent community response. Targets: Two-hour urgent community response standard
Method: Backtest-weighted ensemble of current-level seasonal movement, damped annual drift and a damped recent seasonal trend; at least 2 components are required. The final fit uses 52 consecutive months. Accuracy is tested on 18 rolling one-month-ahead forecasts. The 80% range uses empirical historical error quantiles from 18 forecast errors. Weights use inverse rolling RMSE and are shrunk toward equal weights. The pre-release commentary compares the current-level seasonal component with the combined forecast. Provider distribution and trajectory watch are shown on page 2.

Two-hour urgent community response

Distribution and trajectory watch · July 2026

Provider distribution

Latest reported performance across providers. This is a comparison of current levels, not a measure of whether each provider is improving or deteriorating.

Trajectory watch

Signals show sustained departures from each provider's own archived outlook. A low performer can be improving, and a high performer can be deteriorating. Status: Sufficient national and provider history.

84 providers assessed	6 sustained favourable	4 sustained adverse	74 without an active signal
Largest sustained favourable moves		Largest sustained adverse moves

MANCHESTER UNIVERSITY NHS FOUNDATION TRUST Latest 95.3% · 6 consecutive releases assessed historically simulated	25.2pp SIX-MONTH GAP	SOUTH TYNESIDE AND SUNDERLAND NHS FOUNDATION TRUST Latest 72.3% · 6 consecutive releases assessed historically simulated	8.2pp SIX-MONTH GAP
OXFORD HEALTH NHS FOUNDATION TRUST Latest 88.6% · 6 consecutive releases assessed historically simulated	13.7pp SIX-MONTH GAP	HARROGATE AND DISTRICT NHS FOUNDATION TRUST Latest 77.8% · 6 consecutive releases assessed historically simulated	6.9pp SIX-MONTH GAP
Trajectory-watch rule. Six consecutive release surprises are compared with forecasts made before each release. A signal requires a material average gap, at least five of six months in the same direction, and the latest month confirming that direction. These are screening prompts—not league tables, causal estimates or judgements of provider quality.
