Provider distribution and trajectory signals · data through September 2026

The latest release has been incorporated into the provider screen. 47 providers can be assessed across six consecutive releases. Favourable signals outnumber adverse signals, 15 to 9.

Provider distribution

Latest reported performance across providers. This shows current levels; it is separate from whether a provider has improved or deteriorated relative to its own trajectory.

Moderate = 1–<2×; marked = at least 2× the metric-specific materiality threshold.

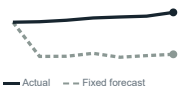

Trajectory watch

Each provider's six actual months are compared with one forecast path fixed before that window. Both lines begin at the same observed value. The displayed gap is the latest actual minus the fixed forecast for that same month. A low performer can therefore be improving, while a high performer can be deteriorating. Status: Actual performance is compared with the monthly path forecast six months earlier. The displayed figure is the latest actual minus the fixed forecast for that same month; the six-month window checks persistence.

Forecast fixed before the six-month window

11.9pp
LATEST MONTH: BELOW FORECAST

WHITTINGTON HEALTH NHS TRUST
Latest 60.0% · 6 months compared with a path fixed six months earlier
Forecast fixed before the six-month window

10.5pp
LATEST MONTH: BELOW FORECAST

Trajectory-watch rule. Six actual months are compared with one path forecast before the six-month window. The sparkline begins at the shared observed starting value, then shows how actual performance diverged from that fixed path. The displayed gap is the latest actual minus the fixed forecast for that same month. A signal requires a material latest-month gap and at least five of six months in that direction. These are screening prompts—not league tables, causal estimates or judgements of provider quality.

Reference: 78% by March 2027.
