Longer-term outlook and milestones

Descriptive projection; not forced to meet targets.

Benchmark: 75% national standard. 9.6pp above milestone

Data: NHS Talking Therapies monthly statistics. **Targets:** NHS Talking Therapies waiting-time standard

Method: Backtest-weighted ensemble of current-level seasonal movement, damped annual drift and a damped recent seasonal trend; at least 2 components are required. The final fit uses 85 consecutive months. Accuracy is tested on 36 rolling one-month-ahead forecasts. The 80% range uses empirical historical error quantiles from 36 forecast errors. Weights use inverse rolling RMSE and are shrunk toward equal weights. The pre-release commentary compares the current-level seasonal component with the combined forecast. Provider page withheld. Provider trajectory watch is disabled for this measure.
