A&E four-hour performance

Provider distribution and trajectory signals · data through October 2026

The latest release has been incorporated into the provider screen. 120 providers can be assessed across six consecutive releases. Adverse signals outnumber favourable signals, 34 to 12.

Provider distribution

Latest reported performance across providers. This shows current levels; it is separate from whether a provider has improved or deteriorated relative to its own trajectory.

Moderate = 1–<2×; marked = at least 2× the metric-specific materiality threshold.

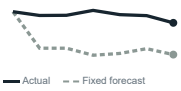

Trajectory watch

Each provider's six actual months are compared with one forecast path fixed before that window. Both lines begin at the same observed value. The displayed gap is the latest actual minus the fixed forecast for that same month. A low performer can therefore be improving, while a high performer can be deteriorating.

120	12	34	74
providers assessed	sustained favourable	sustained adverse	without an active signal

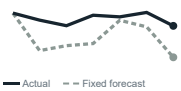

Largest sustained favourable moves

North Cheshire And Mersey NHS Foundation Trust
Latest 73.0% · 6 months compared with a path fixed six months earlier
Forecast fixed before the six-month window

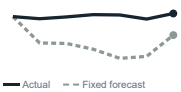

9.6pp
LATEST MONTH: ABOVE FORECAST

University Hospital Southampton NHS Foundation Trust
Latest 67.5% · 6 months compared with a path fixed six months earlier
Forecast fixed before the six-month window

7.6pp
LATEST MONTH: ABOVE FORECAST

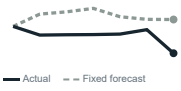

Nottingham University Hospitals NHS Trust
Latest 67.9% · 6 months compared with a path fixed six months earlier
Forecast fixed before the six-month window

6.4pp
LATEST MONTH: ABOVE FORECAST

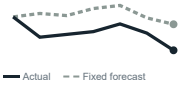

Largest sustained adverse moves

Airedale NHS Foundation Trust
Latest 48.6% · 6 months compared with a path fixed six months earlier
Forecast fixed before the six-month window

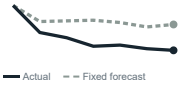

18.9pp
LATEST MONTH: BELOW FORECAST

Harrogate And District NHS Foundation Trust
Latest 65.7% · 6 months compared with a path fixed six months earlier
Forecast fixed before the six-month window

9.6pp
LATEST MONTH: BELOW FORECAST

York And Scarborough Teaching Hospitals NHS Foundation Trust
Latest 61.3% · 6 months compared with a path fixed six months earlier
Forecast fixed before the six-month window

7.9pp
LATEST MONTH: BELOW FORECAST

Trajectory-watch rule. Six actual months are compared with one path forecast before the six-month window. The sparkline begins at the shared observed starting value, then shows how actual performance diverged from that fixed path. The displayed gap is the latest actual minus the fixed forecast for that same month. A signal requires a material latest-month gap and at least five of six months in that direction. These are screening prompts—not league tables, causal estimates or judgements of provider quality.

Reference: 95% constitutional standard.

Data: NHS England A&E attendances and emergency admissions.
