

A&E four-hour performance

Provider distribution and trajectory signals · data through September 2026

The latest release has been incorporated into the provider screen. 120 providers can be assessed across six consecutive releases. Adverse signals outnumber favourable signals, 33 to 14.

Provider distribution

Latest reported performance across providers. This shows current levels; it is separate from whether a provider has improved or deteriorated relative to its own trajectory.

Trajectory watch

Signals show sustained departures from each provider's own archived outlook. A low performer can be improving, and a high performer can be deteriorating. The archive is still building; signal rows state whether they use archived release forecasts, a historical backtest, or both.

120 providers assessed	14 sustained favourable	33 sustained adverse	73 without an active signal
Largest sustained favourable moves		Largest sustained adverse moves	
George Eliot Hospital NHS Trust Latest 86.7% · 6 months compared with a path fixed six months earlier fixed six month path backtest	13.7pp AVERAGE GAP FROM FIXED PATH	Airedale NHS Foundation Trust Latest 61.9% · 6 months compared with a path fixed six months earlier fixed six month path backtest	10.4pp AVERAGE GAP FROM FIXED PATH
North Cheshire And Mersey NHS Foundation Trust Latest 75.2% · 6 months compared with a path fixed six months earlier fixed six month path backtest	11.8pp AVERAGE GAP FROM FIXED PATH	Harrogate And District NHS Foundation Trust Latest 72.1% · 6 months compared with a path fixed six months earlier fixed six month path backtest	7.0pp AVERAGE GAP FROM FIXED PATH
Nottingham University Hospitals NHS Trust Latest 66.2% · 6 months compared with a path fixed six months earlier fixed six month path backtest	10.8pp AVERAGE GAP FROM FIXED PATH	Milton Keynes University Hospital NHS Foundation Trust Latest 70.2% · 6 months compared with a path fixed six months earlier fixed six month path backtest	6.8pp AVERAGE GAP FROM FIXED PATH
Trajectory-watch rule. Six consecutive release surprises are compared with forecasts made before each release. A signal requires a material average gap, at least five of six months in the same direction, and the latest month confirming that direction. These are screening prompts—not league tables, causal estimates or judgements of provider quality.
