Recent performance and current release

The vertical band is the 80% expected range.

Longer-term outlook and milestones

Descriptive projection; not forced to meet targets.

Benchmark: 70% national standard. 15.9pp above milestone
Data: NHS England two-hour urgent community response. **Targets:** Two-hour urgent community response standard
Method: Backtest-weighted ensemble of current-level seasonal movement, damped annual drift and a damped recent seasonal trend; at least 2 components are required. The final fit uses 53 consecutive months. Accuracy is tested on 18 rolling one-month-ahead forecasts. The 80% range uses empirical historical error quantiles from 18 forecast errors. Weights use inverse rolling RMSE and are shrunk toward equal weights. The pre-release commentary compares the current-level seasonal component with the combined forecast. Provider distribution and trajectory watch are shown on page 2.

Two-hour urgent community response

Distribution and trajectory watch · July 2026

Provider distribution

Latest reported performance across providers. This is a comparison of current levels, not a measure of whether each provider is improving or deteriorating.

Trajectory watch

Signals show sustained departures from each provider's own archived outlook. A low performer can be improving, and a high performer can be deteriorating. Status: Actual performance is compared with the monthly path forecast six months earlier. The displayed figure is the average gap across those six months.

83 providers assessed	15 sustained favourable	8 sustained adverse	60 without an active signal
Largest sustained favourable moves		Largest sustained adverse moves	
LINCOLNSHIRE COMMUNITY HEALTH SERVICES NHS TRUST Latest 86.8% · 6 months compared with a path fixed six months earlier fixed six month path backtest 49.0pp AVERAGE GAP FROM FIXED PATH		WHITTINGTON HEALTH NHS TRUST Latest 50.0% · 6 months compared with a path fixed six months earlier fixed six month path backtest 11.3pp AVERAGE GAP FROM FIXED PATH	
MANCHESTER UNIVERSITY NHS FOUNDATION TRUST Latest 96.0% · 6 months compared with a path fixed six months earlier fixed six month path backtest 29.1pp AVERAGE GAP FROM FIXED PATH		SOUTH TYNESIDE AND SUNDERLAND NHS FOUNDATION TRUST Latest 76.5% · 6 months compared with a path fixed six months earlier fixed six month path backtest 9.4pp AVERAGE GAP FROM FIXED PATH	
STOCKPORT NHS FOUNDATION TRUST Latest 92.3% · 6 months compared with a path fixed six months earlier fixed six month path backtest 23.5pp AVERAGE GAP FROM FIXED PATH		DERBYSHIRE COMMUNITY HEALTH SERVICES NHS FOUNDATION TRUST Latest 82.9% · 6 months compared with a path fixed six months earlier fixed six month path backtest 9.3pp AVERAGE GAP FROM FIXED PATH	

Trajectory-watch rule. Six actual months are compared with the corresponding path fixed before the six-month window. A signal requires a material average gap, at least five of six months in the same direction, and the latest month confirming that direction. These are screening prompts—not league tables, causal estimates or judgements of provider quality.
