

Cancer treatment within 62 days

Forecast for August 2026 · data through July 2026

Cancer treatment within 62 days is forecast to remain broadly stable at the next release, from 71.2% to 70.7%. Current-level seasonal and underlying-trend effects are small or offsetting, leaving the outlook broadly stable. The current projection is off course for 80% by March 2027. Sustained favourable/adverse provider signals: 22/9.

The vertical band is the 80% expected range.

Longer-term outlook and milestones

Descriptive projection; not forced to meet targets.

Benchmark: 85% constitutional standard. 6.6pp below milestone

Data: NHS England cancer waiting times. **Targets:** Medium Term Planning Framework interim target · Medium Term Planning Framework final target

Method: Backtest-weighted ensemble of current-level seasonal movement, damped annual drift and a damped recent seasonal trend; at least 2 components are required. The final fit uses 52 consecutive months. Accuracy is tested on 24 rolling one-month-ahead forecasts. The 80% range uses empirical historical error quantiles from 24 forecast errors. Weights use inverse rolling RMSE and are shrunk toward equal weights. The pre-release commentary compares the current-level seasonal component with the combined forecast. Provider distribution and trajectory watch are shown on page 2.

Cancer treatment within 62 days

Distribution and trajectory watch · July 2026

Provider distribution

Latest reported performance across providers. This is a comparison of current levels, not a measure of whether each provider is improving or deteriorating.

Trajectory watch

Signals show sustained departures from each provider's own archived outlook. A low performer can be improving, and a high performer can be deteriorating. Status: Sufficient national and provider history.

119 providers assessed	22 sustained favourable	9 sustained adverse	88 without an active signal

HAMPSHIRE HOSPITALS NHS FOUNDATION TRUST Latest 71.8% · 6 consecutive releases assessed historically simulated		GLOUCESTERSHIRE HOSPITALS NHS FOUNDATION TRUST Latest 74.6% · 6 consecutive releases assessed historically simulated	
7.0pp SIX-MONTH GAP		4.9pp SIX-MONTH GAP	

Trajectory-watch rule. Six consecutive release surprises are compared with forecasts made before each release. A signal requires a material average gap, at least five of six months in the same direction, and the latest month confirming that direction. These are screening prompts—not league tables, causal estimates or judgements of provider quality.
