The vertical band is the 80% expected range.

Longer-term outlook and milestones

Descriptive projection; not forced to meet targets.

Benchmark: 92% constitutional standard. 4.0pp below milestone

Data: NHS England referral to treatment waiting times. Targets: Medium Term Planning Framework national target · Medium Term Planning Framework final target

Method: Backtest-weighted ensemble of current-level seasonal movement, damped annual drift and a damped recent seasonal trend; at least 2 components are required. The final fit uses 228 consecutive months. Accuracy is tested on 36 rolling one-month-ahead forecasts. The 80% range uses empirical historical error quantiles from 36 forecast errors. Weights use inverse rolling RMSE and are shrunk toward equal weights. The pre-release commentary compares the current-level seasonal component with the combined forecast. Provider distribution and trajectory watch are shown on page 2.

Distribution and trajectory watch · July 2026

Provider distribution

Latest reported performance across providers. This is a comparison of current levels, not a measure of whether each provider is improving or deteriorating.

Trajectory watch

Signals show sustained departures from each provider's own archived outlook. A low performer can be improving, and a high performer can be deteriorating. Status: Sufficient national and provider history.

COUNTESS OF CHESTER HOSPITAL NHS FOUNDATION TRUST Latest 67.6% · 6 consecutive releases assessed historically simulated	8.3pp SIX-MONTH GAP

Largest sustained adverse moves

SUSSEX COMMUNITY NHS FOUNDATION TRUST Latest 58.3% · 6 consecutive releases assessed historically simulated	8.9pp SIX-MONTH GAP
BRADFORD DISTRICT CARE NHS FOUNDATION TRUST Latest 58.4% · 6 consecutive releases assessed historically simulated	6.5pp SIX-MONTH GAP
GREAT WESTERN HOSPITALS NHS FOUNDATION TRUST Latest 57.9% · 6 consecutive releases assessed historically simulated	3.3pp SIX-MONTH GAP

Trajectory-watch rule. Six consecutive release surprises are compared with forecasts made before each release. A signal requires a material average gap, at least five of six months in the same direction, and the latest month confirming that direction. These are screening prompts—not league tables, causal estimates or judgements of provider quality.
